For Immediate Release: March 12, 2015

Establishing a HACCP Program for the Feed Industry Training Planned
Kansas State University’s IGP Institute is partnering with AFIA and NGFA to hold HACCP for feed course.

MANHATTAN, Kan. – Establishing a HACCP program is important when it comes to a diverse agriculture industry. Kansas State University’s IGP Institute is partnering with the National Grain and Feed Association and American Feed Industry Association to hold the AFIA-NGFA-KSU Establishing a HACCP for the Feed Industry course June 8-11, 2015.

“The course provides the basic tools for feed millers and how to implement all the principles of HACCP step-by-step,” says Carlos Campabadal, IGP Institute feed manufacturing and grain quality management curriculum manager. “Participants leave with the right knowledge to develop a HACCP plan at their facility.”

The course covers topics including hazard analysis, identifying critical control points, and establishing critical limits, monitoring procedures, corrective actions and verification procedures.

Past course participant, Feed Mill Manager Lucas Porter from Bell Aquaculture, says he enjoyed interacting with course instructors and participants.

“‘The rules and regulations are obviously something you can find online,’ Porter says. ‘But to be able to have the real-world scenarios in hand to bounce back and forth I think is the real value of this course.”

Individuals involved in any sector of the feed industry are encouraged to attend. The course content applies to feed mill managers, quality assurance personnel and ingredient suppliers.

This is just one example of the trainings offered through IGP Institute. In addition to feed manufacturing and grain quality management, IGP offers courses in the areas of grain marketing and risk management, and grain processing and flour milling. To register, visit www.igpevents.grains.ksu.edu. For more information visit the IGP website at www.grains.k-state.edu/igp.
