Grain Protectants

Current/Traditional:

- Malathion
- Reldan®
- Actellic® *
- Diatomaceous Earth*
- Diacon® *
- Storcidetm

Future:

- Storcidetm II
- Securedtm

*To be discussed by other speakers
“TRADITIONAL PRODUCTS”

• Malathion
  – 6% Dust

• Reldan 4E

• Storicide
Malathion

• Registered since the early ’60s as a grain protectant
• For several years it was an effective product, but today most stored grain insects are resistant to Malathion
• CROPS-Wheat, Corn, Sorghum, Oats, Rice, Barley, and Sunflowers
• Currently registered as a 6% Dust Product Only
Reldan 4E

• Chlorpyrifos-methly is the active ingredient

• Registered in 1985

• CROPS- Barley, Oats, Rice, Sorghum, and Wheat

• Does not have the Lesser Grain Borer on the label

• Reldan 4E - 6 ppm use until December 05

• Reldan 4E - 3ppm past 2005
Storcide

- Contains chlorpyrifos-methyl + Cyfluthrin 3 ppm + 2 ppm
- Registered in 2002
- Registered on Barley, Oats, Rice, Sorghum, and Wheat
- Controls most Stored Grain Insects
- U.S. tolerance only – Not in other countries
Storcide Stored Grain Insect Control
Adult Insect Control-project 91837

“NEW PRODUCTS”

- Storcid II
- Secure
  - Flowable
  - Dry
  - 80 WP
STORCIDE II

• Contains: Chlorpyrifos-Methly + Deltamethrin 3 ppm + 0.5 ppm

• To be registered in 2004

• Registered on Barley, Oats, Rice, Sorghum, and Wheat

• Effective against all stored grain insects

• Tolerances in most foreign countries
Mortality of adults exposed for 14 days to various concentrations of Reldan+Deltamethrin*

24 weeks post-treatment and number of F1 progeny

Secure®

• Contains Spinosad (Spinosyn A+Spinosyn D)

1996 - One of the First Products Classified by the US EPA as a Reduced Risk Product.

1999 - Winner of Presidential Green Chemistry Challenge Award

2002 - Certified by USDA National Organic Standards Board as an Organic Product for Controlling Insect Pests in Organic Farming
Spinosad

- Essentially non-hazardous to terrestrial birds, mammals, and some aquatic species
- Acute oral LD$_{50}$ levels
  - Rat >3738 mg/kg
  - Bobwhite Quail >2000 mg/kg
  - Rainbow Trout 30 mg/l
  - Earthworm >970 mg/kg
- Reported to have minimum disruption of beneficial insects and non-target organisms
Regulatory Profile

• **Low mammalian toxicity**
  - EPA hazard class: “Caution” (Class III/IV)
  - No evidence of oncogenicity, mutagenicity, teratogenicity, or neurotoxicity in acute, sub-acute and chronic studies
  - Readily metabolized and excreted by mammals

• **Low environmental impact**
  - Low mobility in soil, degrades quickly
    • Soil half-life = 9 - 15 days
    • Soil sorption $K_d = 129$ (low mobility)
  - Low acute toxicity to fish, aquatic invertebrates, and algae
  - Low acute and chronic avian toxicity
  - Minimal impact on beneficial arthropods relative to alternative protectants.
Secure Products Pending

• Secure Flowable – 0.75 lb ai/gal
  – 9.5 fl oz/ 5 gal of water for 1000 bushels of wheat

• Secure Dry – 0.5% Dry product
  – 12 lbs/1000 bu of wheat

• Secure 80W
  – 1.2 oz/5 gal of water/1000 bushels of wheat
Proposed Crops on Label

- Barley
- Bird Seed
- Corn
- Cotton
- Millet, foxtail
- Millet, pearl
- Millet, proso
- Oats
- Peanuts (in shell)
- Rice
- Sorghum/milo
- Soybeans
- Sunflowers
- Wheat
Laboratory Efficacy Results
Secure as a Grain Protectant (1mg/kg)

Data from: Subramanyam, Toews, Fang 2002
Secure Persistence and Stability in Treated Grain

Data from: Fang, Subramanyam, Dolder 2002; Fang, Subramanyam, Arthur 2002

- Spinosad 1 ppm chemical residues in treated grain were stable for up to 1 yr under Kansas farm grain bin conditions.

- No significant loss in residues despite grain bin temperatures ranging from -10 to 32 C (14 to 94 F) over this same 1-yr period.

- Spinosad was equally effective on wheat with a moisture content ranging from 12.5 to 14.5%.

- Simultaneous bioassays showed these 1 ppm residues provided 100% control of Lesser Grain Borer for up to 1 yr under these widely varying temperature and moisture conditions.

Data from: Toews and Subramanyam 2003; Toews, Subramanyam, Rowan 2003

- **Secure at rates of 0.05 – 1.0 mg/cm² is highly contact-active to adult grain beetle species.**
- **Raises the possibility of using spinosad for clean-out or crack-and-crevice surface treatments.**

Data from Rowan, Huang, and Subramanyam, KSU, 2004

In this 2004 corn study, we see much better control of Red Flour Beetle, Sawtooth Grain Beetle, Rice Weevil, and Maize Weevil than previously seen on wheat.

*** = nearly complete control at 1 ppm (1mg/kg)

- Broad spectrum of control
- Susceptibility varies, but most species are controlled at 1 ppm either as adults or larvae
- Very long residual compared to current standards
- No resistance issues
- Level of control can vary with commodity type

Laboratory characterization nearing completion and large scale field trials have validated performance in multiple geographies
Proposed US Grain Protectant Label

Commodities: Barley, Birdseed, Corn, Cotton Seed, Oats, Peanuts (in shell), Rice, Sorghum/Milo, Soybeans, Sunflower, Wheat.

Pests: Including but not restricted to adults and larvae of Lesser grain borer, Indian meal moth, Angoumois grain moth. Also Rice weevil, Granary weevil, Maize weevil, Red flour beetle, Sawtooth grain beetle, Flat grain beetle.

Maximum Rate: 1 ppm (1mg/kg)
Secure: Stored Grain Conclusions

- Efficacious on key pests
- Potential to set new standard for length of protection
- A new mode of action to rotate with
- Formulation options (liquid and dry)
- Organic options
- Low Residues
- No odor
- Non-Toxic to Mammals, applicator friendly, etc.
- Unaffected by Heat and Moisture
- Does not effect the physical characteristics of the grain
- Accepted by millers, bakers, brewers, etc.
- CODEX or Import Tolerances established
- Consumer Accepted
